SMARTCOOL™

Smartcool is helping clients save energy, increase profits and promote environmental sustainability through the installation of the Energy Saving Module™ and ECO³™. These green technologies reduce the electricity consumption (kWh) and demand (KW) of the compressors in air conditioning and refrigeration systems.

Smartcool's affiliations with several leading organizations promoting energy efficiency provide significant benefits for clients using Smartcool products. Financial incentives and corporate recognition can be achieved with Smartcool and these organizations. These are just two good reasons to get involved in the efforts to make business operations smart, sustainable and responsible.

As an Energy Star® Service and Product Provider (SPP), Smartcool can help identify energy saving opportunities and quantify the financial value of improved energy performance in your business. Working with an Energy Star® SPP like Smartcool can help you achieve operational excellence and distinguish you as an environmental leader.

The U.S. Green Building Council (USGBC) is a non profit organization that developed the Leadership in Energy and Environmental Design (LEED) Green Building Rating System. The LEED system assigns points to new and renovated buildings, based on their design, construction and operation.

Smartcool's Energy Saving Module™ and ECO³™ contribute towards satisfying requirements for credits in the Energy & Atmosphere and Innovation measures within LEED.

Flex Your Power is California's initiative aimed at providing detailed information on energy efficiency in the state. As a partner organization, Smartcool is passing information through to clients and helping them achieve the energy reduction goals established by Flex Your Power, particularly by reducing the base demand load on air conditioning and refrigeration systems.

BC Hydro Power Smart is an innovative program providing education, information and incentives to help make the province of British Columbia more energy efficient. Smartcool is registered with the Power Smart Alliance and works with BC Hydro clients on select energy efficiency projects.

In addition to involvement with these organizations, Smartcool continues to gain corporate recognition as an innovator and leader in the field of energy efficiency.

TSX Venture is a trade-mark of TSX Inc. and is used under license
